American University of Beirut
EECE 502 – Final Year Project
Course Coordinator – Dr. Youssef Tawk
Minutes for the Weekly Group Meeting – Submitted per Group

Meeting #	Date:	Time:	Duration:	Meeting called by:	Minutes Taker:
13	4/18/26	09:00 am	30m	⦿ Advisor ○ Students	Raghad Al Agha

Attendees:

Raghad Al Agha, Lynn Ariss, Hadi Elham, Claritta Khoury

Briefly summarize the main discussions during the meeting:

The meeting focused on updates to the mobile application, hardware fabrication, and system integration. On the app side, new features were implemented including email recipient management with verification codes, alert-based sharing (instead of periodic emails), a foot overview page with zone-based navigation, password reset functionality, and ongoing work on biometrics and UI improvements. The system allows users to add/remove recipients securely and ensures alerts are only sent when critical events occur. On the hardware side, the team explored real-world fabrication options, visiting manufacturers in areas like Bourj Hammoud and Ashrafieh to assess feasibility. Discussions included testing Velostat under pressure conditions, creating a small mock-up for validation, and adapting the design to fit manufacturing constraints. The wearable shoe design continues to evolve, with consideration for modular assembly and durability. On the integration side, updates included reconnecting Arduino data to the app, adding IMU-based step counting and motion detection, and implementing new dashboard views for plantar pressure images, heart rates, SpO2, and edema tracking over time.

Briefly summarize the conclusions drawn regarding the above-mentioned discussions:

The team concluded that the application is progressing well with improved functionality, particularly in secure alert sharing and user interaction features. Hardware development is entering a critical validation phase, where mock-ups and material testing will determine the feasibility of the final wearable design. The integration between sensors and the app is functional but still requires refinement, especially in ensuring accurate real-time data representation. Moving forward, the focus will be on validating fabrication methods, finalizing the wearable structure, and continuing to stabilize system integration across hardware and software components.

Enumerate the assigned tasks by the FYP advisor for each student + the deadline for delivery:

Assigned Task / Per Student	Name of the Student	Deadline
continue working on the application UI (settings and zones), working on user manual (and translating if design finalized)	Raghad Al Agha	Wednesday April 22,2026
Continue working on the UI (integrating biometrics in sign in page and work on the sharing data option)	Lynn Ariss	Wednesday April 22,2026
Work on BPE inference model and potential integration and help in building the shoe if needed	Hadi Elham	Wednesday April 22,2026
Continue working on designing the shoe and material selection, datasheet update	Claritta Khoury	Wednesday April 22,2026
