American University of Beirut
EECE 502 – Final Year Project
Course Coordinator – Dr. Youssef Tawk
Minutes for the Weekly Group Meeting – Submitted per Group

Meeting #	Date:	Time:	Duration:	Meeting called by:	Minutes Taker:
14	4/26/25	9 am	40 mins	◉ Advisor ○ Students	Hadi Elham

Attendees:

Lynn Ariss, Raghad AL Agha, Claritta Khoury

Briefly summarize the main discussions during the meeting:

The discussions focused on presentation preparation, wearable design refinement, application updates, and model challenges. Feedback was given on improving the presentation by restructuring slides into a clearer pipeline, enlarging visuals, and allowing more time for explanation. On the hardware side, the team explored practical assembly of the wearable prototype using layered materials (including Velostat) and discussed ways to protect and integrate electronic components within a compact and manufacturable design. The application development progressed with features such as email alert management, user removal notifications, reconnection options, and improved device interaction flows. Additionally, challenges were discussed regarding PPG data processing and model training, particularly the mismatch between collected sensor data and the dataset used for training, leading to inconsistencies in model performance and accuracy.

Briefly summarize the conclusions drawn regarding the above-mentioned discussions:

It was concluded that the presentation needs refinement in structure and clarity to effectively communicate results within the time limit. The hardware design is still in an experimental phase, requiring further testing and optimization before finalizing a compact and reliable wearable prototype. On the software side, the application is functionally advancing but still requires polishing and full integration with the hardware. The main technical challenge remains aligning real sensor data with the training dataset to improve model reliability, indicating that further preprocessing, calibration, or dataset adaptation will be necessary before achieving stable performance.

Enumerate the assigned tasks by the FYP advisor for each student + the deadline for delivery:

Assigned Task / Per Student	Name of the Student	Deadline
Model Integration, assist in hardware design and minor UI fixes	Hadi Elham	2/5/2026
Soldering all components to assemble full wearabel, work on user manual, continue report and poster crafting	Raghad Al Agha	2/5/2026
User Manula design and UI fixes	Lynn Ariss	2/5/2026
Soldering all components to assemble full wearable, sewing components onto sandals, work on data, continue report and poster crafting	Claritta Khoury	2/5/2026
